HP MSM-802.11n Access Point Series

**Key features**
- Single radio
- IEEE 802.11 a/b/g/n access point
- Increased network speed and capacity
- Protection against rogue 802.11a/b/g/n AP/client
- Indoor enclosure

**Product overview**
HP offers intelligent IEEE 802.11n wireless access points, ranging from our single-radio IEEE 802.11a/b/g/n to our dual 802.11 a/b/g/n access points. The MSM access points are advanced wireless devices that provide consistent, easy-to-manage connectivity that expands your existing network. The access points maintain your network without interruption and reduce bottlenecks and network complexity by determining where data needs to go throughout the network. The MSM access points provide complete wireless coverage for greater reliability and connectivity. The HP IEEE 802.11n-capable RF Security sensor brings security to the network edge by providing scalable 24 x 7 IDS/IPS capabilities that prevent security breaches on IEEE 802.11a/b/g and 802.11n wireless networks. The MSM access points and RF Security sensor require a single Power over Ethernet (PoE)-cable drop, are IEEE 802.3af compliant, and support a plug-and-play automatic configuration.
Features and benefits

Quality of Service (QoS)

- **IEEE 802.1p prioritization** delivers data to devices based on the priority and type of traffic
- **SpectraLink Voice Priority (SVP) support** prioritizes SpectraLink voice IP packets sent from a SpectraLink NetLink SVP server to SpectraLink wireless voice handsets to help ensure excellent voice quality

Wireless

- L2/L3/L4 classification: IEEE 802.1p VLAN priority, SpectraLink SVP, and DiffServ
- Wi-Fi MultiMedia (WMM), IEEE 802.11e EDCF, and Service-Aware priority assigned by VSC
- Maximum VoIP call capacity: 12 active calls on IEEE 802.11 a/b/g/n

Network management

- Fully manageable using HP Manager and HP Mobility Manager
- SNMP v2c, SNMP v3, MIB-II with Traps, and RADIUS Authentication Client MIB (RFC 2618)
- Embedded HTML management tool with secure access (SSL and VPN)
- Scheduled configuration and firmware upgrades from a central server

Diagnostic

- Client event log records association, authentication, and DHCP events
- Packet capture tool for Ethernet and IEEE 802.11 interfaces (PCAP format)

Intrusion detection/prevention system (IDS/IPS)

- **Protection against rogue IEEE 802.11a/b/g/n access points and wireless clients** HP MSM415 RF Security Sensors continuously scan for detection, classification, and prevention of wireless threats on IEEE 802.11a/b/g and 802.11n wireless networks
- **Provides 24 x 7 detection, classification, and prevention capabilities** HP MSM415 RF Security Sensors are able to continuously provide detection, classification, and prevention capabilities, even when the connectivity to the HP RF Manager IDS/IPS Controller is lost; the MSM415 security sensor supports all HP and third-party WLAN deployments
- **Signature-based detection** detects attacks that have known attack patterns; IPS maintains a signature database that contains the pattern definitions for known attacks that can be automatically updated using a subscription service
- **Protocol anomaly-based detection** detects attacks that use anomalies in application protocol payloads

Connectivity

- **Auto-MDIX** automatically adjusts for straight-through or crossover cables on all 10/100 ports
- **IEEE 802.3af Power over Ethernet (PoE) support** simplifies deployment and dramatically reduces installation costs by helping to eliminate the time and cost involved in supplying local power at each access point location

Mobility

- **Anywhere, anytime wireless coverage**
  - Single radio IEEE 802.11a/b/g/n access point
  - Per-radio software-selectable configuration of frequency bands
  - Self-healing, self-optimizing local mesh extends network availability

Auto Channel Select (ACS)

- Helps reduce radio co-channel interference by automatically selecting an unoccupied radio channel
Security

- **Choice of IEEE 802.11i, WPA2, or WPA**
  locks out unauthorized wireless access by authenticating users prior to granting network access; robust Advanced Encryption Standard (AES) or Temporal Key Integrity Protocol (TKIP) encryption secures the data integrity of wireless traffic

- **Local wireless bridge client traffic filtering**
  when enabled, prevents communication between wireless devices associated with the same access point
